

Release Notes

Version 1.0.0 - Initial Release

Release Date: 2023-10-01

Status: Stable

Summary

This release introduces the Employee Leave Application for our organization. It allows employees to submit leave requests and HR personnel to approve them. The application includes a user-friendly interface, robust backend services, and secure data handling.

New Features

- **Employee Leave Request Submission:** Employees can submit leave requests through a web interface, specifying the leave type, start date, and end date. This feature enables employees to request time off efficiently.
- **Leave Request Approval Workflow:** HR personnel can approve or reject leave requests, updating the status accordingly. This feature streamlines the leave approval process.
- **Leave Balance Tracking:** The application tracks and displays the leave balance for each employee, ensuring transparency and compliance with leave policies.

Core Capabilities Delivered

- **User Authentication and Authorization:** Secure login and role-based access control using Spring Security.
- **Data Persistence:** Data storage and retrieval using Spring Data JPA and PostgreSQL.
- **RESTful API Endpoints:** Functional endpoints for leave request operations, including submission, retrieval, approval, and rejection.

Improvements & Polish

- **Input Validation:** Field-level validation ensures data integrity and prevents invalid requests.
- **Error Handling:** Standardized error responses provide clear feedback to users.
- **UI Refinement:** Improved user interface for better usability and accessibility.

Known Issues & Limitations

- **Third-Party Integrations:** Not implemented in this version. Will be addressed in version 1.1.
- **Performance:** The application handles up to 1000 records efficiently.

Breaking Changes

- None

Compatibility

- Requires: Java 11, PostgreSQL 13
- Tested on: Windows 10, macOS 11, Ubuntu 20.04

Upgrade Notes

To deploy this release:

1. Back up the database
2. Pull the latest code: `git pull origin main`
3. Install/update dependencies: `mvn clean install`
4. Run migrations if any: `mvn liquibase:update`
5. Restart services
6. Verify health: `curl http://localhost:8080/actuator/health`

Contributors

- **John Doe:** Lead Developer
- **Jane Smith:** UI/UX Designer
- **Alex Brown:** Security Expert

What's Next

Planned for Version 1.1

- **Third-Party Integrations:** Integration with third-party services for additional functionality.
- **Performance Enhancements:** Optimizations for handling larger datasets.
- **Additional Leave Types:** Support for more leave types like "Bereavement" and "Maternity".

Future Roadmap

- **Mobile Application:** Development of a mobile app for leave request submission and approval.
- **Advanced Analytics:** Implementation of analytics for leave usage and trends.
