

Release Notes

Version 1.0.0 - Initial Release

Release Date: 2023-10-01

Status: Stable

Summary

This release introduces the Employee Leave Application system, designed to streamline the process of submitting, approving, and tracking leave requests within the organization. The system includes a user-friendly interface for employees to submit leave applications, view their leave balances, and track the status of their leave requests. The backend is built using Spring Boot, with a PostgreSQL database for persistence, and Spring Security for authentication and authorization.

New Features

- **Employee Leave Application Submission:** Employees can submit leave applications through a user-friendly interface. This feature enables employees to request leave without needing to go through a manual process.
- **Leave Application Approval Workflow:** Managers can approve or reject leave applications through the system. This feature streamlines the approval process and ensures that leave requests are handled efficiently.
- **Leave Balance Tracking:** Employees can view their leave balances and track the status of their leave requests. This feature provides transparency and helps employees plan their leave more effectively.

Core Capabilities Delivered

- **RESTful API Endpoints:** The system includes RESTful API endpoints for leave application submission, retrieval, approval, rejection, and leave balance tracking.
- **Database Schema:** The system includes a PostgreSQL database schema with tables for employees and leave requests.
- **Security:** The system includes authentication and authorization using Spring Security, with JWT-based authentication and role-based access control.

Improvements & Polish

- **Input Validation:** All inputs are validated against expected formats and constraints using Spring's `@Valid` annotation and custom validators.
- **SQL Injection Prevention:** Parameterized queries and Spring Data JPA are used to prevent SQL injection.
- **UI Refinement:** The user interface has been refined to provide a better user experience.

Known Issues & Limitations

- **Limited Leave Types:** Currently, only "SICK", "VACATION", and "PERSONAL" leave types are supported. Additional leave types will be added in future releases.
- **Performance:** The system handles up to 1000 records efficiently.

Breaking Changes

- None

Compatibility

- **Requires:** Java 11, PostgreSQL 13, Spring Boot 2.5.4
- **Tested on:** Windows 10, macOS 11, Ubuntu 20.04

Upgrade Notes

To deploy this release:

1. Back up the database
2. Pull the latest code: `git pull origin main`
3. Install/update dependencies: `mvn clean install`
4. Run migrations if any: `mvn flyway:migrate`
5. Restart services
6. Verify health: `curl http://localhost:8080/actuator/health`

Contributors

- **John Doe:** Lead Developer
- **Jane Smith:** UI/UX Designer
- **Alex Johnson:** Security Consultant

What's Next

Planned for Version 1.1

- **Additional Leave Types:** Support for additional leave types such as "MATERNITY" and "PATERNITY".
- **Leave Carry Forward:** Implement leave carry forward functionality.
- **Performance Improvement:** Optimize database queries for better performance.

Future Roadmap

- **Integration with HR System:** Integrate with the organization's HR system for leave data synchronization.
- **Mobile Application:** Develop a mobile application for leave management.
