

Release Notes

Version 1.0.0 - Initial Release

Release Date: 2023-10-10

Status: Stable

Summary

This release introduces the Employee Leave Application for our organization, enabling employees to submit leave requests and managers to approve them. The application includes robust security features, comprehensive validation, and detailed API documentation.

New Features

- **Employee Leave Request Submission:** Employees can submit leave requests with details such as leave type, start date, and end date. The request is initially marked as "PENDING".
- **Leave Request Approval Workflow:** Managers can approve or reject leave requests, updating the request status to "APPROVED" or "REJECTED" respectively.
- **Leave Balance Retrieval:** Employees can view their available leave balance for different leave types.

Core Capabilities Delivered

- **RESTful API Endpoints:** Comprehensive API endpoints for leave requests, approvals, and leave balance retrieval.
- **Business Logic Implementation:** Services for processing leave requests, approvals, and notifications.
- **Data Persistence:** PostgreSQL database for storing leave requests, employee details, and leave balances.

Improvements & Polish

- **Input Validation:** All endpoints validate incoming data to ensure it adheres to predefined constraints.
- **Security Enhancements:** JWT-based authentication, OAuth2 for third-party login, and role-based access control.
- **UI Refinement:** Improved user experience with clear error messages and validation feedback.

Known Issues & Limitations

- **Limited Leave Types:** Currently supports only SICK and VACATION leave types. Additional types will be added in future releases.

- **Performance:** Handles up to 1000 records efficiently. Performance may degrade with higher volumes.
- **No Email Notifications:** Email notifications for leave requests and approvals will be implemented in version 1.1.

Breaking Changes

- **None:** This is the initial release with no breaking changes.

Compatibility

- **Requires:** Java 11, PostgreSQL 13, Node.js 14
- **Tested on:** Windows 10/Chrome, macOS/Safari, Ubuntu/Firefox

Upgrade Notes

To deploy this release:

1. Back up the database
2. Pull the latest code: `git pull origin main`
3. Install/update dependencies: `mvn install`
4. Run migrations if any: `mvn liquibase:update`
5. Restart services
6. Verify health: `curl http://localhost:8080/api/health`

Contributors

- **John Doe:** Lead Developer, API design and implementation
- **Jane Smith:** Security Expert, Authentication and authorization
- **Alex Brown:** Database Administrator, Schema design and setup

What's Next

Planned for Version 1.1

- **Email Notifications:** Implement email notifications for leave requests and approvals.
- **Additional Leave Types:** Add support for MATERNAL, PATERNAL, and UNPAID leave types.
- **Performance Improvement:** Optimize database queries for better performance with large datasets.

Future Roadmap

- **Mobile App:** Develop a mobile application for leave request submission and approval.
- **Integration with HR Systems:** Integrate with existing HR systems for leave balance synchronization.

Feedback & Support

- **Report issues:** [GitHub Issues](<https://github.com/org/leave-app/issues>)
- **Request features:** [GitHub Issues](<https://github.com/org/leave-app/issues>)
- **Documentation:** See README.md, User Guide, and API Documentation
