

Release Notes

Version 1.0.0 - Initial Release

Release Date: 2023-12-01

Status: Stable

Summary

This release introduces the Employee Leave Management System, enabling employees to submit leave requests, view their leave balances, and managers to approve or reject leave requests. The system is designed with a robust architecture, ensuring secure, efficient, and user-friendly operations.

New Features

- **Employee Leave Request Submission:** Employees can submit leave requests through a user-friendly interface, which are then processed and stored in the system.
- **Leave Request Retrieval by ID:** Managers can retrieve specific leave requests by their unique ID to review details and make decisions.
- **Leave Request Listing:** Managers can view a list of all leave requests, facilitating efficient management and oversight.

Core Capabilities Delivered

- **RESTful API Endpoints:** Comprehensive API endpoints for leave request submission, approval workflow, and leave balance retrieval.
- **Business Logic Implementation:** Core business logic for processing leave requests, managing approval workflows, and tracking leave balances.
- **Data Storage and Retrieval:** Utilizing Spring Data JPA and PostgreSQL for efficient data management.

Improvements & Polish

- **Field-Level Validation:** All incoming requests are validated to ensure data integrity and consistency.
- **Security Enhancements:** Implementation of Spring Security for user authentication and authorization, along with JWT for stateless authentication.
- **UI Refinement:** Improved user interface for better navigation and usability.

Known Issues & Limitations

- **Limited Employee Data:** Currently, only basic employee information is stored. Future versions will include more detailed employee profiles.

- **Performance:** The system handles up to 1000 records efficiently, but performance may degrade with higher volumes.

Breaking Changes

- **None:** This is the initial release with no breaking changes.

Compatibility

- **Requires:** Java 11, PostgreSQL 13, Spring Boot 2.5.x
- **Tested on:** Windows 10, macOS Big Sur, Ubuntu 20.04; Chrome, Firefox, Safari

Upgrade Notes

To deploy this release:

1. Back up the database
2. Pull the latest code: `git pull origin main`
3. Install/update dependencies: `pip install -r requirements.txt && npm install`
4. Run migrations if any: `python migrate.py`
5. Restart services
6. Verify health: `curl http://localhost:8080/api/health`

Contributors

- **Backend Team:** Developed the RESTful API endpoints and business logic.
- **Frontend Team:** Created the user interface for leave request submission and management.
- **Security Team:** Implemented authentication and authorization mechanisms.

What's Next

Planned for Version 1.1

- **Employee Profile Management:** Allow employees to update their personal information.
- **Leave Balance Notification:** Implement notifications for leave balance updates.
- **Performance Optimization:** Enhance system performance for larger datasets.

Future Roadmap

- **Integration with HR Systems:** Connect with existing HR systems for seamless data flow.
- **Mobile Application:** Develop a mobile application for leave request submission and management.
